

On-boarding institutions

A South African perspective

Onboarding – common features

- Documented SOPs for on-boarding
- Eligibility verification
- Sign a document

- Lots could be automated, but we don't...

Onboarding – eduroam

- Use DjNRO for management
- Autogenerates RadSecProxy configs – no manual changes
- Config in Github
- Changes by institutions result in pull requests, checked by a human

Onboarding - SAFIRE

- Registry consists of flat XML files in Github
- Aggregator assembles that into a feed
- Changes are made manually, with human vetting

- All operations driven by metadata; no direct provider config on hub, proxies or discovery.
